**Changes in this issue:**

Estimates of seasonally adjusted and trend long-term unemployment are published for the first time in Table 26 of this publication.

Table 29: "Unemployed persons: age and active steps taken to find work" will no longer be published in this publication. As a result of the permanent removal of Table 29, all subsequent tables have been renumbered. See the list below for a comprehensive list of changes to Table numbers.

For further information regarding these changes, contact Darryl Malam on (06) 252 6525.

# **SECTION A: MONTHLY LABOUR FORCE SURVEY**

## Long-term unemployment trends

This issue of *The Labour Force, Australia* (6203.0) introduces new series of seasonally adjusted and trend estimates of long-term unemployment, shown in Table 26.

The new seasonally adjusted and trend series are presented for persons unemployed between 52 and 104 weeks, 104 weeks and over, and total long-term unemployed (persons unemployed for 52 weeks or more). The table also presents the proportion of long-term unemployed to total unemployment in seasonally adjusted and trend terms.

While subject to revision for the most recent 6 months, trend (smoothed seasonally adjusted) estimates permit examination of the underlying direction of the data, free of seasonal effects and irregular/residual factors. For discussion of trend estimates, see paragraphs 30 to 33 of the Explanatory Notes.

### Trend estimates

In trend terms, estimates of unemployed persons, those unemployed for fifty-two weeks or more and persons unemployed for 104 weeks or more are all declining from their peaks recorded in September, October and November 1993, respectively.

In the last twelve months, the level of long-term unemployment has declined by 21.7 per cent (a fall of 64,800), compared with the fall of 10.6 per cent (-88,300) recorded for all unemployed persons.

In more recent months, the declining trend for long-term unemployment has begun to slow. In the first quarter of 1995, monthly decreases in trend estimates of long-term unemployed lay in the range of -9,100 to -10,200, while in the three months to August, the decreases were in the range of -3,700 to -1,600.

Trend estimates for persons unemployed for 104 weeks or more have fallen by 35,100 in the past year and by 26,800 since January 1995.

DIAGRAM 1. UNEMPLOYED PERSONS  
TREND ESTIMATES

**Unemployed 52 weeks or more**

Trend estimates of persons unemployed for fifty-two weeks or more fell to a low of 113,800 in November 1989 (the lowest level since late 1982) before rising rapidly to a peak of 351,400 in October 1993. In August 1995, the trend estimate of long-term unemployed persons was 234,400, a fall of 33.3 per cent since the October 1993 peak. This month's estimate is the lowest since October 1991, and has now fallen by 40,400 (-14.7%) since January 1995.

**DIAGRAM 2. PERSONS UNEMPLOYED 52 WEEKS OR MORE  
TREND ESTIMATES**

**Long-term unemployed:  
proportions**

In August 1995, the proportion of all unemployed persons who had been unemployed for fifty-two weeks or longer was 31.5 per cent, the lowest rate since February 1992. It has declined by 5.8 percentage points since the peak of 37.3 per cent recorded in November and December 1993, and by 4.8 percentage points in the ten months since last October's high point of 36.3 per cent. In recent years, long-term unemployment as a proportion of total unemployment was at its lowest (20%) in November 1990.

**DIAGRAM 3. PROPORTION OF UNEMPLOYED PERSONS  
UNEMPLOYED 52 WEEKS OR MORE**

### Unemployed between 52 and 103 weeks

Trend estimates appear to show that the fall in the number of persons unemployed for more than 52 weeks but less than 104 weeks is beginning to level off. While trend estimates for the most recent periods are subject to revision, the current trend may signal a slowing in the rate of decrease, similar to those recorded in early 1993 and mid 1994. The August 1995 estimate of 100,000 represents a fall of 45.3 per cent since the August 1992 peak of 182,900 and a fall of 12.0 per cent since the beginning of the year.

**DIAGRAM 4. PERSONS UNEMPLOYED BETWEEN 52 AND 103 WEEKS  
TREND ESTIMATES**

### Unemployed 104 weeks and over

The number of persons unemployed for 104 weeks or more stood at a three-year low of 134,300 in August 1995 after falling by 20.2 per cent in the ten months since last October. At that time, the trend resumed its rapid decline from the November 1993 peak of 191,500. Since January 1995, trend estimates of very long-term unemployment have fallen by 26,800 (-16.6%).

**DIAGRAM 5. PERSONS UNEMPLOYED 104 WEEKS OR MORE  
TREND ESTIMATES**

**Unemployed for 104 weeks and more: proportions of long-term unemployed**

In August 1995, 57.3 per cent of all long-term unemployed persons had been unemployed for 104 weeks or longer. The trend has been falling since the February 1995 peak of 59.0 per cent, which was reached following the trough of 40.2 per cent recorded in January 1992. The proportion last peaked at 60.6 per cent in May 1989, slightly higher than the February 1995 peak.

**DIAGRAM 6. PROPORTION OF LONG-TERM UNEMPLOYED PERSONS UNEMPLOYED 104 WEEKS OR MORE**

**Data availability**

The ABS has a wide range of unpublished data relating to long-term unemployment. These data are available on microfiche, floppy disk and customised reports. The ABS generally makes a charge for providing unpublished statistical information. Address inquiries to Darryl Malam in Canberra (06) 252 6525 or contact any ABS office.

## The Labour Market in Brief: August 1995

### Trend estimates

In August 1995, the provisional trend estimate of employment rose to 8,282,900, 4.1 per cent higher than a year ago. Full-time employment continued to rise to 6,257,400. For males, the trend estimate of full-time employment rose to 4,184,600 in August 1995 (2.6% higher than a year ago) but the rate of growth has slowed in recent months. For females, the full-time employment trend estimate rose to 2,072,800 (5.3% higher than a year ago). Trend estimates of unemployment continued to fall, although for males the provisional trend unemployment estimate increased slightly in August 1995. The trend unemployment rate for males remained at 8.7 per cent for the third consecutive month while for females, the rate fell slightly to 7.6 per cent. Trend estimates of the participation rate remained unchanged at 63.8 per cent, with the rate for both males and females steady at 73.8 and 54.1 per cent respectively.

### Employment

In August 1995, the seasonally adjusted estimate of employment was relatively steady at 8,273,900. Part-time employment for males rose by 20,000 to 516,900 while for females, there was a fall of 32,500 to 1,498,600. The full-time employment estimate rose by 13,200 to 6,258,400, with female full-time employment rising by 13,200 to 2,071,500.

### Unemployment

The seasonally adjusted estimate of unemployment for August 1995 rose by 10,900 to 753,200. Female unemployment rose by 15,800, with a rise of 12,300 females seeking part-time work. Male unemployment dropped slightly to 446,000.

### Unemployment rate

The August 1995 seasonally adjusted unemployment rate rose by 0.1 percentage points to 8.3 per cent. The rate for females rose by 0.4 points to 7.9 per cent while the rate for males dropped slightly to 8.7 per cent.

### Participation Rate

The seasonally adjusted estimate of the labour force participation rate for males rose by 0.1 percentage points to 73.9 per cent in August 1995. For females, the participation rate fell by 0.1 points to 54.0 per cent.

# PARTICIPATION RATE BY STATE: TREND SERIES

## New South Wales

The trend participation rate in New South Wales reached its highest point of 62.3 per cent during the first four months of 1991. After falling sharply to a low point of 60.7 per cent in April and May 1993, the trend participation rate in New South Wales has risen again to 62.2 per cent in August 1995.

## Victoria

The trend estimate of the participation rate in Victoria rose to a peak of 65.0 per cent in June 1990, before falling to a low of 62.3 per cent at the beginning of 1993. Since November 1994 the trend estimate has been rising, and stands at 63.7 per cent in August 1995.

## Queensland

For Queensland, trend estimates of the participation rate rose to a high point of 64.6 per cent in July and August 1990. After falling to 63.3 per cent in late 1991, the rate showed small variations over the next three years until it began a steeper climb in the second half of 1994, rising to 65.3 per cent in June and July 1995. In August 1995 the trend participation rate slipped to 65.1 per cent.

# **PARTICIPATION RATE BY STATE: TREND SERIES**

## **South Australia**

Trend estimates of the participation rate for South Australia rose to a high of 63.1 per cent between November 1990 and February 1991, followed by a sharp fall to 61.4 per cent in October 1991. The trend fluctuated between 60.0 and 61.0 per cent over the next three years (falling to 61.1% in March 1994), and has risen in each of the last six months, to 62.4 per cent in August 1995.

## **Western Australia**

From a peak of 65.8 per cent in mid 1990, trend estimates of the participation rate in Western Australia fell generally, to a low of 64.5 per cent in late 1992 and early 1993. Trend estimates have been rising steadily since then, to peak at 67.1 per cent in April and May 1995, and have fallen in each of the last three months, to 66.6 per cent in August 1995.

## **Tasmania**

After reaching a peak of 62.4 per cent in November and December 1989, the trend participation rate for Tasmania fell to 59.8 per cent at the beginning of 1992. The trend showed relatively small changes over the next few years and fell to a low of 59.5 per cent in August 1994. In August 1995, the trend estimate was 60.1 per cent.

# **PARTICIPATION RATE BY TERRITORY AND AUSTRALIA: TREND SERIES**

## **Northern Territory**

Northern Territory trend estimates of the participation rate have shown two marked troughs during the last ten years, the first reaching a low point of 65.0 per cent in March 1988, which was followed by a peak of 75.8 per cent a year later. The most recent trough fell to a low of 64.9 per cent in March 1994, followed by a high of 74.5 per cent in January 1995. Since then, the rate has fallen to stand at 69.7 per cent in August 1995.

## **Australian Capital Territory**

The trend estimate of the participation rate in the Australian Capital Territory fell to a low rate of 69.7 per cent in January 1987, followed by peaks of 73.9 per cent in April 1988, and again in July to September 1989. There was another trough of 70.8 per cent in March and April 1992. Since February 1995, the rate has been increasing to reach 74.2 per cent in August 1995.

## **Australia**

After reaching a peak of 64.0 per cent in July and August 1990, the trend estimate of the participation rate fell over the next three years to a low of 62.3 per cent in April and May 1993. The participation rate has been rising since then, except for a small decline in the first half of 1994, to stand at 63.8 per cent in August 1995.

## PRINCIPAL LABOUR FORCE ESTIMATES: TREND SERIES

### Employment

The trend employment estimate for August 1995 was 8,282,900, 388,200 higher than the peak of 7,894,700 recorded in June 1990. After the June 1990 peak, the number of employed persons fell to a low point of 7,615,400 in January 1993, before rising by 8.8 per cent to its current level.

### Unemployment

After falling to a low of 491,500 persons in October 1989, the trend estimate of unemployment increased, to peak at 947,200 in September 1993. The number of unemployed persons has been falling consistently since then, to stand at 744,600 in August 1995.

### Unemployment rate

After falling to a low point of 5.9 per cent in late 1989, the trend estimate of the unemployment rate rose over the next three years to peak at 11.1 per cent in December 1992. The unemployment rate has been falling since then to stand at 8.2 per cent in August 1995, the lowest rate since December 1990.

## EXPLANATORY NOTES

### Changes in this issue

From the August 1995 issue of this publication, Table 26 has been expanded to include seasonally adjusted and trend estimates of long-term unemployment.

Also from this issue, former Table 29 "Unemployed persons by age and active steps taken to find work" has been removed from this publication. All tables that appear thereafter have been renumbered.

If you have any queries about these changes, contact Darryl Malam on (06) 252 6525.

### Introduction

1. This publication contains estimates of the civilian labour force derived from the Labour Force Survey component of the Monthly Population Survey. Estimates of the labour force characteristics of family members and of family composition are also included.

2. Estimates of the civilian labour force are available for over sixty regions across Australia and are shown in various publications produced by State offices of the ABS. These data are also available on microfiche or as a special data service. For details, contact any ABS office.

3. Preliminary survey results are published in advance of this more detailed publication in *The Labour Force, Australia, Preliminary* (6202.0).

4. Although emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are available on request. Summary statistics from these surveys are published in *The Labour Force, Australia* (6203.0), from time to time.

### The population survey

5. The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about one-half of one per cent of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

### Scope

6. The Labour Force Survey includes all persons aged 15 and over except:
- (a) members of the permanent defence forces;
  - (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
  - (c) overseas residents in Australia; and
  - (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

From July 1993 Jervis Bay Territory is also excluded from the scope of the survey. Before July 1993 it was included in estimates for the Australian Capital Territory.

### Coverage

7. In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible. See paragraph 43 for information about the effect of the coverage rules on family statistics.

8. Persons who are away from their usual residence for six weeks or less

at the time of interview are enumerated at their usual residence (relevant information may be obtained from other usual residents present at the time of the survey).

#### **Population benchmarks**

9. Labour Force Survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the usually resident population aged 15 and over by age and sex. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. Persons who, at the time of interview, are overseas for more than six weeks but for less than twelve months are included in the independent population statistics (benchmarks) and are thus provided for in the calculation of the estimates. The benchmarks are the latest available estimates at the time the Labour Force Survey is conducted, but they usually differ from the official population estimates subsequently published in *Australian Demographic Statistics* (3101.0) because they are derived from incomplete information about population changes.

#### **Revision of population benchmarks**

10. Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each Census of Population and Housing, and when population estimation bases are reviewed. These revisions affect original, seasonally adjusted and trend estimates. The last such revision was made in February 1994 to take account of the results of the 1991 Census of Population and Housing, which affected all the monthly estimates from January 1989 to January 1994.

11. Population benchmarks used in the estimation of Labour Force Survey data are compiled according to place of usual residence. For an explanation of the conceptual basis of population estimates, see *Information Paper: Population Estimates: An Outline of The New Conceptual Basis of ABS Population Estimates* (3216.0). Prior to October 1982, labour force estimates were based on a combination of place of enumeration and place of usual residence.

#### **History of the survey**

12. National surveys were conducted in February, May, August and November each year from 1964 to February 1978. The survey has been conducted on a monthly basis since February 1978.

#### **Questionnaire changes**

13. The questionnaire used in the survey for the collection of labour force data has been revised from time to time, the latest occasion being for the April 1986 survey. Details of these changes have been published in *Information Paper: Questionnaires Used in the Labour Force Survey* (6232.0) in March 1978, December 1981, August 1984, June 1986, June 1991 and March 1993.

#### **Inclusion of contributing family workers**

14. In April 1986, the questionnaire was revised following the extension of the definition of employed persons to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). This definition aligned the Australian labour force concepts with the set of definitions adopted by the 13th International Conference of Labour Statisticians in October 1982.

15. Previously, contributing family workers who worked 1 to 14 hours, or who had such a job but were not at work, were defined as either unemployed or not in the labour force, depending on whether they were actively looking for work. In order to assist users to assess the impact of the change, estimates for March 1986 based on the new definition were shown in footnotes to Tables 1 and 2 of the February, March and April 1987 issues of this publication.

16. A revised procedure for weighting families estimates, as presented in this publication, was also introduced in April 1986. Additional tables were included in the April 1986 issue of this publication to show the impact of this new procedure. Paragraph 48 contains more details.

#### **Comparability of series**

17. As noted in paragraph 10, estimates from January 1989 were revised to con-

form to revised population estimates following the 1991 Census of Population and Housing, and are thus not strictly comparable with estimates for periods prior to January 1989. An examination of the revised estimates showed that the effects on Labour Force Survey estimates for the period before January 1989 were inconsequential, and that no meaningful purpose would be served by publishing revised estimates for that period.

18. Comparability with estimates produced from the quarterly Survey of Employment and Earnings is affected by the use of a different survey methodology and definitions. The Labour Force Survey provides estimates of people in jobs whereas the Survey of Employment and Earnings provides an estimate of the number of jobs held by wage and salary earners. A more detailed description of the differences between these two series is provided in *Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0).

19. From December 1989 onwards, the category "other families" was split into "one-parent families" and "other families". Therefore estimates of other families were not strictly comparable with estimates in previous issues. However, in November 1989, 97 per cent of other families with dependants were one-parent families. In March 1994, a new families classification was introduced which also affected comparability (see paragraphs 45 to 47).

#### Survey sample redesign

20. Following each Population Census, the ABS redesigns and reselects the Labour Force Survey to take into account the new information which is obtained from the Census. The sample used in the Labour Force Survey from September 1987 to August 1992, which was designed and selected using preliminary data from the 1986 Census, was updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992. For additional information, see *Information Paper: Labour Force Survey Sample Design* (6269.0), available from any ABS office.

21. The sampling fractions for each State/Territory differ and are such that the resultant sample yields reliable estimates of the main labour force aggregates for each State and Territory. The sampling fractions for the new sample together with the sampling fractions determined from the 1986 Census are:

	1986 Census redesign	1991 Census redesign
New South Wales	1 in 230	1 in 277
Victoria	1 in 230	1 in 242
Queensland	1 in 160	1 in 195
South Australia	1 in 115	1 in 139
Western Australia	1 in 115	1 in 146
Tasmania	1 in 70	1 in 75
Northern Territory	1 in 115	1 in 75
Australian Capital Territory	1 in 115	1 in 75

#### Reliability of the estimates

22. Estimates in this publication are subject to two sources of error:

- (a) sampling error: since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes; and
- (b) non-sampling error: inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to

reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

#### **Differences between Census and Labour Force Survey estimates**

23. The results of the 1991 Census of Population and Housing show that labour force estimates derived from the census differ from those derived from the Labour Force Survey.

24. The broad concepts underlying the measures of the labour force and its components, employment and unemployment, are similar in the census and the survey. It should be noted, however, that census estimates of unemployment do not take into account the 'available for work' criterion.

25. There are considerable differences in both the collection methodology adopted (including the detailed questions asked) and estimation procedures. Factors contributing to differences in estimates include under-enumeration in the population census for which census labour force estimates have not been adjusted, the use in the Labour Force Survey of population benchmarks derived from incomplete information about population change (see paragraph 9), the inclusion of permanent defence forces in census estimates, the personal interview approach adopted in the survey as opposed to self-enumeration of census schedules, differing questions used to determine labour force characteristics (particularly the identification of unemployed persons) and differing methods of adjustment for non-response to the survey or census.

26. The Labour Force Survey provides detailed and up-to-date estimates of employment and unemployment for Australia, States and regions, whereas the Census of Population and Housing provides counts for small areas but in less detail than is available from the survey.

27. These considerations should be borne in mind when comparisons are made between population census and Labour Force Survey estimates.

#### **Seasonal adjustment**

28. Seasonally adjusted series are published in Tables 2, 8 and 39. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement in series at the Australia level, with the following frequency:

Employment:	5 in 10 monthly movements
Unemployment:	7 in 10 monthly movements
Unemployment rate:	7 in 10 monthly movements
Participation rate:	9 in 10 monthly movements

29. The seasonal factors for all seasonally adjusted series are reviewed annually to take account of each additional year's original data. The latest review, in February 1995, revised the Australian and State seasonally adjusted and trend monthly series back to February 1978. Information about the method of adjustment and revised seasonally adjusted and trend estimates for all months since January 1990 for Australia and the States were published in an Appendix to the February 1995 issue of this publication.

#### **Trend estimation**

30. Smoothing seasonally adjusted series produces a measure of trend by reducing the impact of the irregular component of the series. The monthly trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally

adjusted series. Quarterly trend estimates (eg employment by industry) are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average also uses surrogate forms of the average as the end of a time series is approached. Unlike the surrogate weights of the 13-term Henderson used on monthly data, the weights employed here are tailored to suit the particular characteristics of individual series. These trend series are used to analyse the underlying behaviour of the series over time. Trend series graphs are shown on pages 6 to 9, with the trend series published in Tables 3, 9 and 40. Data from January 1980 are available on the ABS on-line data dissemination service, PC-AUSSTATS. The trend series of the participation rate for married females are based on smoothed population estimates.

31. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months or two quarters have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors mentioned above in paragraph 29.

32. Trend estimates for the Australian Capital Territory and the Northern Territory are published in Table 9. Original estimates for the two Territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month-to-month revisions. They may, however, be revised as a result of the annual re-analysis of seasonal factors.

33. Users may wish to refer to the ABS publication *A Guide to Interpreting Time Series - Monitoring "Trends", an Overview* (1348.0) for further information about trend estimates. Details of the trend weighting patterns are available on request from the Assistant Director, Time Series Analysis on (06) 252 6345.

#### **Month-to-month movements**

34. Care should be taken in the interpretation of month-to-month movements in these estimates. Survey estimates are subject to sampling and non-sampling variability as explained in paragraph 22.

#### **Gross flows**

35. In order to minimise respondent load and at the same time maintain continuity within the population survey sample, one-eighth of the dwellings are replaced after each survey. Adoption of this rotation procedure, whereby about seven-eighths of the sample remains unchanged from one month to the next, enables more reliable measurements of changes in the labour force characteristics of the population to be made than would be possible if a new sample were introduced each month.

36. Because a high proportion of private dwellings selected in one survey remains in the sample for the following survey, it is possible to match the characteristics of most of the persons in those dwellings from one month to the next, to record any changes that occur, and hence to produce estimates of flows between the different categories of the population and labour force.

37. The procedures used to select persons in non-private dwellings preclude the possibility of matching any of them who may be included in successive surveys. For this and other reasons, including the mobility of the population and non-response in either or both surveys, about 10 per cent of persons in those dwellings which are included in the sample in successive months cannot be matched. Those who can be matched represent about 80 per cent of all persons in the survey.

38. Changes in the characteristics of this latter group are shown in the gross flows table (Table 33). About one half of the remaining (unmatched) 20 per cent of persons in the survey are likely to have characteristics similar to those in the matched group, but the characteristics of the other half are likely to be somewhat different.

39. Gross flow estimates relate only to those persons in private dwellings for whom information was obtained in successive surveys. The expansion factors used in calculating the estimates were those applying to the second of each pair of months. Note that the estimates have not been adjusted to account for the unmatched sample component.

40. Although it is not possible to provide gross flow estimates for all persons in the survey it is considered that the estimates derived from matched records will be a useful guide to the proportions of the movements between categories which underlie the changes in monthly levels. When comparing flows for different periods it is important to take into account the population represented by the matched sample, as shown in the last line of the table.

41. While every effort is made to reduce non-sampling errors to a minimum any such errors affecting labour force status will tend to accumulate in the gross flow statistics rather than to cancel out. The estimates are also subject to sampling variability, as explained in the Technical Notes. For these reasons the estimates of flows should be used with caution. The standard errors may be obtained from Table A of the Technical Notes.

#### **Labour force status and other characteristics of families**

42. As a part of survey procedures, family relationships are determined each month, enabling both the estimation of persons cross-classified by their relationship in the household and the estimation of families. This publication contains tables showing the labour force status and family status of individuals and families classified by family type, number of family members, the labour force status of persons within families, the number of children under 15 present and the number of dependants present.

43. Because of the coverage rules, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, hospitals, etc.). The determination of family structure and family characteristics in such cases is difficult. Thus for survey questions used to determine family relationships, scope was further restricted to usual residents of private dwellings and the following persons were excluded:

- (a) all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions); and
- (b) persons enumerated as visitors to (rather than usual residents of) private dwellings.

44. In addition, in those households where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus persons living in households which include a member of the permanent defence forces, who is outside the scope of the population survey, are excluded from survey questions used to determine family relationships because family information could not be obtained from each usual resident. Similarly households which, at the time of the survey, have one or more of their usual residents away for more than six weeks, are excluded from the family survey. This also applies to households from which an incomplete or inadequate questionnaire was obtained for any usual resident in on scope and coverage. A summary of those persons for whom family information is obtained as well as those usual residents of private dwellings for whom complete family information cannot be obtained, and those persons specifically excluded from the family

determination procedures is contained in the family tables. Generally, relationship in household is determined for more than 90 per cent of all civilians aged 15 and over.

### Changes in families classifications

45. *Relationship in household* and *Family type* classifications were introduced in the March 1994 issue of this publication to align with ABS standards. Most categories in the two classifications remain comparable with categories in the previous classifications. The cases in which there are breaks in comparability are discussed in the following paragraphs.

46. *Relationship in household*. This classification was previously referred to as *Family status*.

- (a) *Lone parents* (previously referred to as *Sole parents*) now includes parents with non-dependent children (provided those children are without a spouse or children of their own). These *Lone parents without dependants* are shown separately in Table 35 and there were 205,800 such persons in March 1994.
- (b) *Dependent students* (previously *Full-time students aged 15-24*) now comprise sons or daughters (of a couple or a lone parent) aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time. Other related full-time students, who were also previously classified as *Full-time students aged 15-24* are now included in *Other family persons*. There were 24,200 such persons in March 1994.
- (c) *Other family persons* now comprises the previous groups *Other family head*, excluding those now counted as *Lone parents* (79,200 persons in March 1994), the other related full-time students previously classified as *Full-time students aged 15-24* (see above; 24,200 in March 1994) and *Other relative of married couple or family head* (218,100 in March 1994).

47. *Family type*. This classification was previously referred to as *Type of family*. There are three types of families in the new classification, as follows:

- (a) *Couple families* is the term used to describe families previously referred to as *Married-couple families*. Apart from the name change, the new category is otherwise exactly comparable with the old category.
- (b) *One parent families* now includes those families in which there is a lone parent with only non-dependent children present. Such families were previously included in *Other families*. There were 208,400 of these families in March 1994.
- (c) *Other families* now excludes those families in which there is a lone parent with only non-dependent children present (see above).

48. Estimates of the number of families in this publication differ from those in publications prior to the April 1986 issue. This is due to the adoption of a weighting procedure where the weight for a family is determined using an average of the weights for all family members responding to the Labour Force Survey. Previously, the weight used to derive estimates of the number of families was determined by nomination of a proxy 'head of household' as representative of the family.

### Birthplace

49. From April 1991, labour force birthplace data are aggregated according to major groups of the *Australian Standard Classification of Countries for Social Statistics* (ASCCSS) (1269.0). The ASCCSS was developed by the ABS for use whenever demographic, labour and social statistics are classified by countries.

50. The ASCCSS major groups are based on the concept of geographic proximity. They differ from the country groups presented in this publication prior to April 1991. For example, African countries are now covered by 'The

Middle East and North Africa' and 'Africa (excluding North Africa)', while Asia has been split into 'Southeast Asia', 'Northeast Asia' and 'Southern Asia'. Data for selected individual countries will continue to be available in this publication and comprehensively on microfiche.

## Industry

51. From August 1994, Labour Force Survey industry data are classified according to the Australian and New Zealand Standard Industrial Classification (ANZSIC), a detailed description of which appears in *ANZSIC 1993* (1292.0). Like the previous Australian Standard Industrial Classification (ASIC), ANZSIC classifies businesses according to their economic activities, in a structure consisting of four levels (Division, Sub-division, Group and Class). Labour Force Survey data are coded at the Group level, as was the practice under ASIC. To assist users in making comparisons with previously published data, a concordance has been developed which shows for each ASIC Group, the corresponding ANZSIC Group or Groups. The concordance also shows the estimated employment attributable to each ANZSIC Group, compared with ASIC Group data, according to establishment unit employment data on the ABS Business Register at May 1994. Historical estimates of employment by ANZSIC Group have been compiled on the basis of the concordance. For further information about the application of ANZSIC to Labour Force Survey data, see *Information Paper Labour Force Survey: Introduction of ANZSIC for industry data (Replacement publication)* (6259.0) or contact Darryl Malam on (06) 252 6525.

## Additional data

52. Estimates for employed persons classified by industry, occupation and status in employment are available each February, May, August and November. For these months, the following tables are also published in this publication:

- (a) Employed persons:
  - Industry (original, seasonally adjusted and trend)
  - Industry and occupation:
    - Full-time and part-time workers
    - Status in employment
    - Age and birthplace
    - Hours worked
    - Industry divisions and subdivisions
    - Occupation major and minor groups
    - Industry by occupation.
- (b) Unemployed persons:
  - Industry and occupation of last full-time job:
    - Unemployment rate.

Seasonally adjusted estimates of employed persons by industry have been published in this bulletin since February 1993. Trend estimates have been published since August 1994.

## Related publications

53. Users may also wish to refer to the following publications which relate to the labour force and are available on request:

*The Labour Force, Australia, Preliminary* (6202.0)—issued monthly

*The Labour Force, Australia: Historical Summary, 1978 to 1989* (6204.0)

*Labour Force Projections, Australia: 1995 to 2011* (6260.0)

*The Labour Force, New South Wales* (6201.1)—issued quarterly

*The Labour Force, Victoria* (6202.2)—issued quarterly

*The Labour Force, Queensland* (6201.3)—issued quarterly

*South Australian Economic Indicators* (1307.4)—issued monthly

*Tasmanian Statistical Indicators* (1303.6)—issued monthly

*Employed Wage and Salary Earners, Australia* (6248.0)—issued quarterly

*Labour Statistics, Australia* (6101.0)—issued annually

*Australia's Long-term Unemployed—A Statistical Profile* (6255.0)

*Australian Labour Market* (6284.0)—issued annually

#### **Information Papers and Guides:**

*Australia's Long-term Unemployed—A Statistical Profile* (6255.0)

54. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

#### **Unpublished statistics**

55. The ABS can also make available information which is not published. This information is available on a number of media such as floppy disk, microfiche and customised reports. In general, a charge is made for providing unpublished information. Inquiries should be made to Darryl Malam on Canberra (06) 252 6525 or any ABS office.

#### **Rounding**

56. Estimates have been rounded and discrepancies may occur between sums of the component items and totals.

#### **Symbols and other usages**

- \* subject to sampling variability too high for most practical uses. See paragraph 7 of the Technical Notes.
- n.a. not available

- r revised

## TECHNICAL NOTES

A new sample for the LFS was phased in over the period September to December 1992. For information about the sample design see *Information Paper: Labour Force Survey Sample Design* (6269.0).

### Estimation procedure

2. The labour force estimates are derived from the population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself.

### Reliability of the estimates

3. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. The *sampling error* is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed. Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, are subject to sampling variability; that is, they may differ from the estimates that would have been produced if all dwellings had been included in the surveys. One measure of the likely difference is given by the *standard error*, which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the estimate that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of sampling variability is the *relative standard error* which is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.

4. The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by respondents, errors made in collection such as in recording and coding data, and errors made in processing the data. Inaccuracies of this kind are referred to as the *non-sampling error* and they may occur in any enumeration, whether it be a full count or a sample. It is not possible to quantify non-sampling error, but every effort is made to reduce it to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures. For the examples in paragraphs 9 and 11, it is assumed to be zero. In practice, the potential for non-sampling error adds to the uncertainty of the estimates caused by sampling variability.

5. Space does not allow for the separate indication of the standard errors of all estimates in this publication. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown in Table 1. Standard errors of other estimates and other monthly movements should be determined by using Tables A and B.

6. The size of the standard error increases with the level of the estimate, so that the larger the estimate the larger is the standard error. However, it should be noted that the larger the sample estimate the smaller will be the standard error in percentage terms. Thus, larger sample estimates will be relatively more reliable than smaller estimates.

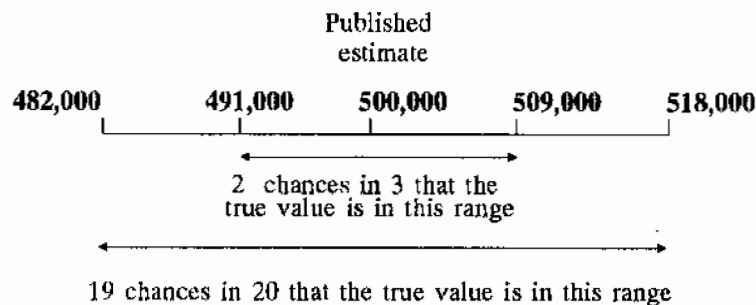

7. As the standard errors in Table A show, *the smaller the estimate the higher is the relative standard error*. Very small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages

based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*3.4) to indicate they are subject to high standard errors and should be used with caution.

8. The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. An indication of the magnitude of standard errors of monthly movements is given in Table B. The estimates of standard error of monthly movements apply only to estimates of movements between two consecutive months. Movements between corresponding months of consecutive quarters (quarterly movements), corresponding months of consecutive years (annual movements) and other non-consecutive months, will generally be subject to somewhat greater sampling variability than is indicated in Table B. Standard errors of *quarterly* movements can be obtained by multiplying the figures in Table A by 1.11. Standard errors of all *annual* movements can be obtained by multiplying the figures in Table A by 1.3. When using Table A or Table B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.

9. Examples of the calculation and use of standard errors are given below:

- (a) Consider an estimate for Australia of 500,000 employed persons aged 15-19. By referring to Table A, in the row for an estimate of 500,000 and the column for Australia, a standard error of 9,000 is obtained. There are about two chances in three that the true value (the number that would have been obtained if the whole population had been included in the survey) is within the range 491,000 to 509,000. There are about nineteen chances in twenty that the true value is in the range 482,000 to 518,000.

- (b) Consider estimates for females employed part time in Australia of 1,387,000 in one month and 1,400,000 in the next month. This represents an upward movement of 13,000. By referring to Table B for the larger estimate of 1,400,000, a movement standard error of 9,800 is obtained (after applying linear interpolation and rounding). Therefore, there are about two chances in three that the true movement is in the range +3,200 to +22,800 and about nineteen chances in twenty that the true movement is in the range -6,600 to +32,600.

10. The relative standard errors of estimates of *aggregate hours worked*, *average hours worked*, *average duration of unemployment*, and *median duration of unemployment* are obtained by first finding the relative standard error of the estimate of the total number of persons contributing to the estimate (see Table A) and then multiplying the figure so obtained by the following relevant factors:

Aggregate hours worked: 1.2  
 Average hours worked: 0.7  
 Average duration of unemployment: 1.3  
 Median duration of unemployment: 2.0  
 Average family size: 0.3

The levels at which these and other labour force estimates have a relative standard error of 25 per cent are shown in Table C.

11. The following is an example of the calculation of standard errors where the use of a factor is required:

- (a) Consider a median duration of unemployment for Australia of 30 weeks, with an estimate of 1,000,000 persons unemployed. Table A gives the standard error as 11,800 which is 1.2 per cent as a *relative standard error*. The factor of 2.0 (see paragraph 10) is applied to the relative standard error of 1.2 per cent to obtain 2.4 per cent. Therefore the *standard error* for the median duration of unemployment is 2.4 per cent of 30 weeks, i.e. about 1 week. So there are two chances in three that the median duration of unemployment is between 29 and 31 weeks, and about nineteen chances in twenty that it is between 28 and 32 weeks.

12. Proportions and percentages (for example, unemployment rates) formed from the ratio of two estimates are also subject to sampling error. The size of the error depends on the accuracy of both the numerator and denominator. The formula for the relative standard error (RSE) of a proportion or percentage is given below:

$$\text{RSE } (x/y) = \sqrt{[\text{RSE } (x)]^2 + [\text{RSE } (y)]^2}$$

13. Standard errors contained in Tables A and B are designed to provide an average standard error applicable for all monthly labour force survey estimates. Analysis of the standard errors applicable to particular survey estimates has shown that the standard errors of estimates of employment are generally equivalent to those shown in Tables A and B, while standard errors for estimates of unemployment and persons not in the labour force are approximately 3 per cent and 11 per cent respectively higher than those shown in the tables. Standard errors for capital cities are approximately the same as those for corresponding States. Standard errors of estimates of numbers of families are approximately the same as those for numbers of persons. Standard errors of estimates of persons born in Australia are approximately the same as those shown in Tables A and B. For aggregate estimates of persons born outside Australia the standard errors are about 14 per cent higher. The standard errors vary for individual countries of birth, but are on average about 7 per cent higher.

TABLE A. STANDARD ERRORS OF ESTIMATES FROM SEPTEMBER 1992(a)

Size of estimate	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Australia	
	— number —								per cent of estimate

## GLOSSARY

<b>Actively looking for work</b>	Includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
<b>Aggregate hours worked</b>	The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.
<b>Attending school</b>	Persons aged 15 to 19 who, during the reference week, were enrolled full time at secondary or high schools.
<b>Attending tertiary educational institution full time</b>	Persons aged 15 to 24 who, during the reference week, were enrolled full time at a TAFE college, university, or other tertiary educational institution.
<b>Average duration of unemployment</b>	For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.
<b>Average family size</b>	For any group of families, the total number of family members divided by the number of families in the group.
<b>Average hours worked</b>	Aggregate hours worked by a group divided by the number of persons in that group.
<b>Birthplace</b>	From April 1991, classified according to the <i>Australian Standard Classification of Countries for Social Statistics (ASCCSS)</i> (1269.0).
<b>Contributing family worker</b>	A person who works without pay, in an economic enterprise operated by a related person living in the same household. (This category was formerly entitled "unpaid family helper").
<b>Couple families</b>	Families in which there are two married persons and these persons are husband and wife.
<b>Dependants</b>	All family members under 15 years of age; all sons or daughters aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).
<b>Dependent student</b>	In couple or one parent families, sons or daughters aged 15 to 19 attending school or aged 15 to 24 attending a tertiary educational institution full time (except those classified as husbands, wives or lone parents).
<b>Duration of unemployment</b>	The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full time for two weeks or more to the end of the reference week.
<b>Employed</b>	Persons aged 15 and over who, during the reference week: <ul style="list-style-type: none"> <li>(a) worked for one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and own account workers); or</li> <li>(b) worked for one hour or more without pay in a family business or on a farm (i.e. contributing family workers); or</li> <li>(c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or</li> </ul>

- (d) were employers, own account workers or contributing family workers who had a job, business or farm, but were not at work.

<b>Employee</b>	A person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates or pay in kind, or in their own business, either with or without employees, if that business was incorporated. (This category was formerly entitled "wage and salary earner").
<b>Employer</b>	A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires one or more employees, and the business was not incorporated.
<b>Employment/population ratio</b>	For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 and over in the same group.
<b>Family</b>	Two or more related persons ( <i>relationship</i> includes relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them: <ul style="list-style-type: none"> <li>(a) sons or daughters of any age, if not married and with no children of their own present;</li> <li>(b) other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or</li> <li>(c) any children under 15 years of age who do not have a parent present.</li> </ul>
<b>Family head</b>	<ul style="list-style-type: none"> <li>(a) Any person without a spouse present, but with a son or daughter aged under 15 present; or</li> <li>(b) persons without a spouse present, without a son or daughter aged under 15 present, but with a son or daughter aged 15 or over present (provided that the son or daughter has no spouse, son or daughter of his/her own present); or</li> <li>(c) where a family has no person falling into either of these categories, the family head is generally defined to be the eldest person in the family.</li> </ul> <p>No family head is determined for a couple family.</p>
<b>Former workers</b>	Unemployed persons who have previously worked full time for two weeks or more but not in the past two years.
<b>Full-time workers</b>	Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.
<b>Household</b>	A group of one or more persons in a private dwelling who consider themselves to be separate from other persons (if any) in the dwelling, and who make regular provision to take meals separately from other persons, i.e. at different times or in different rooms. Lodgers who receive accommodation but not meals are treated as separate households. Boarders who receive both accommodation and meals are not treated as separate households. A household may consist of any number of families and non-family members.
<b>Industry</b>	From August 1994, classified according to the <i>Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993 (1292.0)</i> .
<b>Job leavers</b>	Unemployed persons who have worked full time for two weeks or more in the past two years and <i>left that job voluntarily</i> , that is, because of unsatisfactory work arrangements/pay/hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties; or any other reasons.
<b>Job losers</b>	Unemployed persons who have worked full time for two weeks or more in the past two years and <i>left that job involuntarily</i> , that is: were laid off or retrenched

from that job; left that job because of their own ill-health or injury; the job was seasonal, temporary or a holiday job and they did not leave that job to return to studies; or their last job was running their own business and the business closed down because of financial difficulties.

<b>Labour force</b>	For any group, persons who were employed or unemployed, as defined.
<b>Labour force status</b>	A classification of the civilian population aged 15 and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.
<b>Lone parent</b>	The head of a one parent family.
<b>Lone person</b>	A person who is the sole member of a household.
<b>Long-term unemployed</b>	Persons unemployed for a period of 52 weeks or more.
<b>Main English Speaking Countries</b>	The United Kingdom, Ireland, South Africa, Canada, the United States of America and New Zealand.
<b>Marital status</b>	Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not-married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.
<b>Median duration of unemployment</b>	The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.
<b>Non-dependent child</b>	In couple or one parent families, sons or daughters aged 15 and over not attending school or a tertiary educational institution full time (except those classified as husbands, wives or lone parents).
<b>Non-family member</b>	A person who is not related to any other member of the household in which they are living.
<b>Not in the labour force</b>	Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums, etc.), trainee teachers, members of contemplative religious orders, and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.
<b>Occupation</b>	Classified according to the <i>Australian Standard Classification of Occupations (ASCO) 1986</i> (1222.0).
<b>One parent families</b>	Families in which there is a family head together with at least one son or daughter of his/her own.
<b>Other families</b>	Families which are not couple families or one parent families, as defined. They include families in which there is no parent, for example a family head living with a brother or sister.
<b>Own-account worker</b>	A person who operates his or her own economic enterprise or engages independently in a profession or trade, and hires no employees, and the business was not incorporated (This category was formerly entitled "self employed").
<b>Participation rate</b>	For any group, the labour force expressed as a percentage of the civilian population aged 15 and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

<b>Part-time workers</b>	Employed persons who usually worked less than 35 hours a week and who did so during the reference week.
<b>Seasonally adjusted series</b>	A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraphs 28 and 29 of the Explanatory Notes for more detail.
<b>State capital cities</b>	The areas determining the six State capital cities are the Statistical Divisions for those capital cities defined in the <i>Australian Standard Geographical Classification (ASGC) Manual, Edition 2.1</i> (1216.0).
<b>Status in employment</b>	Employed persons classified by whether they were employers, own account workers, employees, or contributing family workers.
<b>Trend series</b>	A smoothed seasonally adjusted series of estimates. See paragraphs 30 to 33 of the Explanatory Notes for more detail.
<b>Unemployed</b>	Persons aged 15 and over who were not employed during the reference week, and: <ul style="list-style-type: none"> <li>(a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and: <ul style="list-style-type: none"> <li>(i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or</li> <li>(ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or</li> </ul> </li> <li>(b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.</li> </ul>
<b>Unemployed looking for first full-time job</b>	Unemployed persons looking for full-time work who had never worked full time for two weeks or more.
<b>Unemployed looking for first job</b>	Unemployed persons who had never worked full time for two weeks or more.
<b>Unemployed looking for full-time work</b>	Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.
<b>Unemployed looking for part-time work</b>	Unemployed persons who had actively looked for part-time work only, or were to resume a part-time job, from which they had been stood down.
<b>Unemployed persons classified by industry and occupation</b>	Unemployed persons who had worked full time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
<b>Unemployment rate</b>	For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

**SECTION B:  
SUPPLEMENTARY  
DATA**

**LABOUR FORCE STATUS AND OTHER  
CHARACTERISTICS OF FAMILIES, AUSTRALIA,  
JUNE 1995**

### SUPPLEMENTARY AND SPECIAL SURVEYS

The supplementary and special surveys collect data on particular aspects of the labour force. The following is a historical list of supplementary and special labour force surveys. Statistical tables published in these bulletins are available as a Publication or a Standard Data Service, available by subscription or on request. Inquiries should be made to the contact in the Phone Inquiries box on the Contents page. It may be possible to order Unit Record Files on the following supplementary and special surveys by contacting the ABS.

<i>Title of Survey</i>	<i>Catalogue No./ Product No.</i>

## SUMMARY OF FINDINGS

## Overview

Of the 13,338,000 persons aged 15 years and over who were usual residents of private dwellings in Australia in June 1995, and for whom family status could be determined, 83 per cent were members of families (See Section A, Table 35 of the June 1995 issue of this publication). Some 94 per cent of the civilian population aged 15 and over are represented by the estimates in this section. See the Explanatory Notes for further information regarding the calculation of families estimates from the survey.

These persons were members of 4,791,000 families and some 85 per cent of families were *couple families* of which 49 per cent had dependants present. Of the 666,000 *one parent families*, 85 per cent had a female parent (Diagram 1 and June 1995: Section A, Table 37).

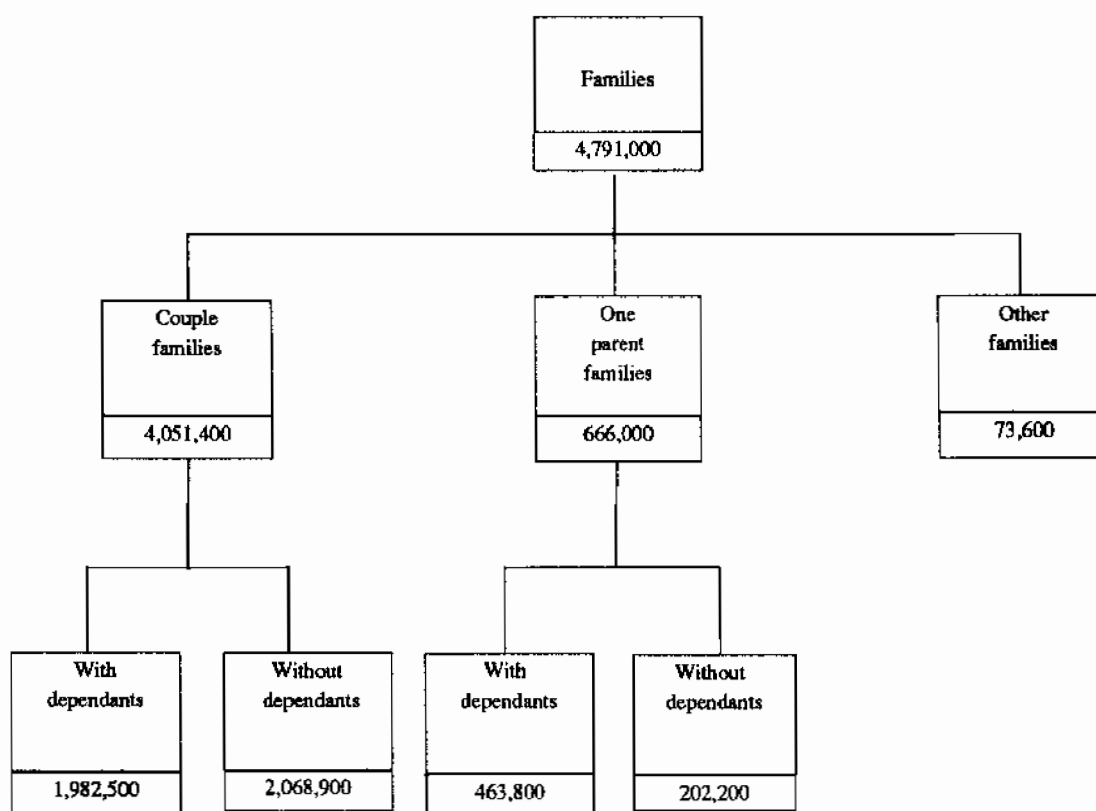

An estimated 24 per cent of *all families* had no family member employed; 26 per cent had one family member employed and a further 50 per cent had two or more family members employed (June 1995: Section A, Table 37). Of the 2,239,400 persons who were not members of a family, 63 per cent lived alone (Diagram 8).

## Couple families

In June 1995, 53 per cent of *couple families* had both partners in the labour force and 26 per cent had only one partner in the labour force. Of the *couple families* with dependants present, 62 per cent had both partners in the labour force. For *couple families* without dependants present, 44 per cent had both partners in the labour force (Diagram 2 and Section B, Table 4).

Of the *couple families* with only one partner in the labour force, that person was the husband in 93 per cent of families with dependants present and 81 per cent of families without dependants present (Section B, Table 4).

DIAGRAM 1: AUSTRALIAN FAMILIES, JUNE 1995

**DIAGRAM 2: COUPLE FAMILIES: LABOUR FORCE STATUS OF HUSBAND AND WIFE, JUNE 1995**  
(% of families)

In *couple families*, one or both partners were employed in 92 per cent of families with dependants present and 61 per cent of families without dependants present (Diagram 3 and Section B, Table 4). For 50 per cent of *couple families* both partners were employed.

Of the *couple families* with dependants present in June 1995, the husband was employed full time in 84 per cent of families and the wife was employed full time in 27 per cent of families (Section B, Table 4). The percentage of *couple families* with the wife employed full time increased as the age of the youngest dependant present increased (Diagram 4 and Section B, Table 4).

In contrast, in *couple families* without dependants present in June 1995, the husband was employed full time in 52 per cent of families and the wife was employed full time in 30 per cent of families (Section B, Table 4).

The proportion of *couple families* with one or both partners unemployed rose from 1990 to 1992, with the largest proportion of unemployment occurring in those families with dependants. It has since decreased by 2.3 percentage points to 6.1 per cent in June 1995. Most of this decrease occurred in those families with dependants present (Diagram 5 and Section B, Table 4).

**DIAGRAM 3: EMPLOYMENT STATUS OF PARTNERS IN COUPLE FAMILIES, JUNE 1995**  
(% of families)

**DIAGRAM 4: COUPLE FAMILIES WITH DEPENDANTS:  
FULL-TIME EMPLOYMENT OF PARENTS, JUNE 1995  
(% of families)**

For *couple families* with dependants present, there were 85,200 families where the husband was unemployed and the wife was either unemployed or not in the labour force (Section B, Table 4).

For 21 per cent of all *couple families*, neither partner was in the labour force. Of these 831,000 *couple families*, 91 per cent were without dependants. Of the 76,700 *couple families* with dependants where neither parent was in the labour force, 77 per cent had dependent children aged 0-14 years (Section B, Table 4).

### One parent families

In June 1995, 666,000 (14%) families were *one parent families*. For 85 per cent of these families the parent was female. Some 463,800 *one parent families* had one or more dependants of which 407,400 (88%) had a female parent (Diagram 1 and June 1995: Section A, Table 38).

In 47 per cent of *one parent families* with dependants, the parent was employed. Of female *one parent families* with dependants, 22 per cent of female parents were employed full time and 22 per cent were employed part time (47% were

**DIAGRAM 5: COUPLE FAMILIES: PROPORTION WITH ONE OR BOTH PARTNERS UNEMPLOYED**

**DIAGRAM 6: ONE PARENT FAMILIES: PROPORTION EMPLOYED AND AGE OF YOUNGEST DEPENDANT, JUNE 1995**  
(% of families)

not in the labour force). For male lone parents, 58 per cent were employed full time and 10 per cent were employed part time (22% were not in the labour force). The percentage of *one parent families* with the parent employed increased as the age of youngest dependant increased (Diagram 6 and Section B, Table 7).

For 327,500 (49%) *one parent families*, the parent was not in the labour force. Of these families 63 per cent had dependants present. In 94 per cent of the 205,500 *one parent families* with dependants, where the parent was not in the labour force, the parent was female (Section B, Table 7).

There were 50,900 (8%) *one parent families* with the parent unemployed. Of these families:

- 42,700 (84%) had a female parent; and
- 35,000 (69%) had dependent children aged 0-14 years (Section B, Table 7).

The proportion of *one parent families* with dependants in which the parent was unemployed was 8.8 per cent in June 1995, a rise of 0.2 percentage points since June 1994 but still 0.7 points lower than the June 1993 peak (Diagram 7 and Section B, Table 7).

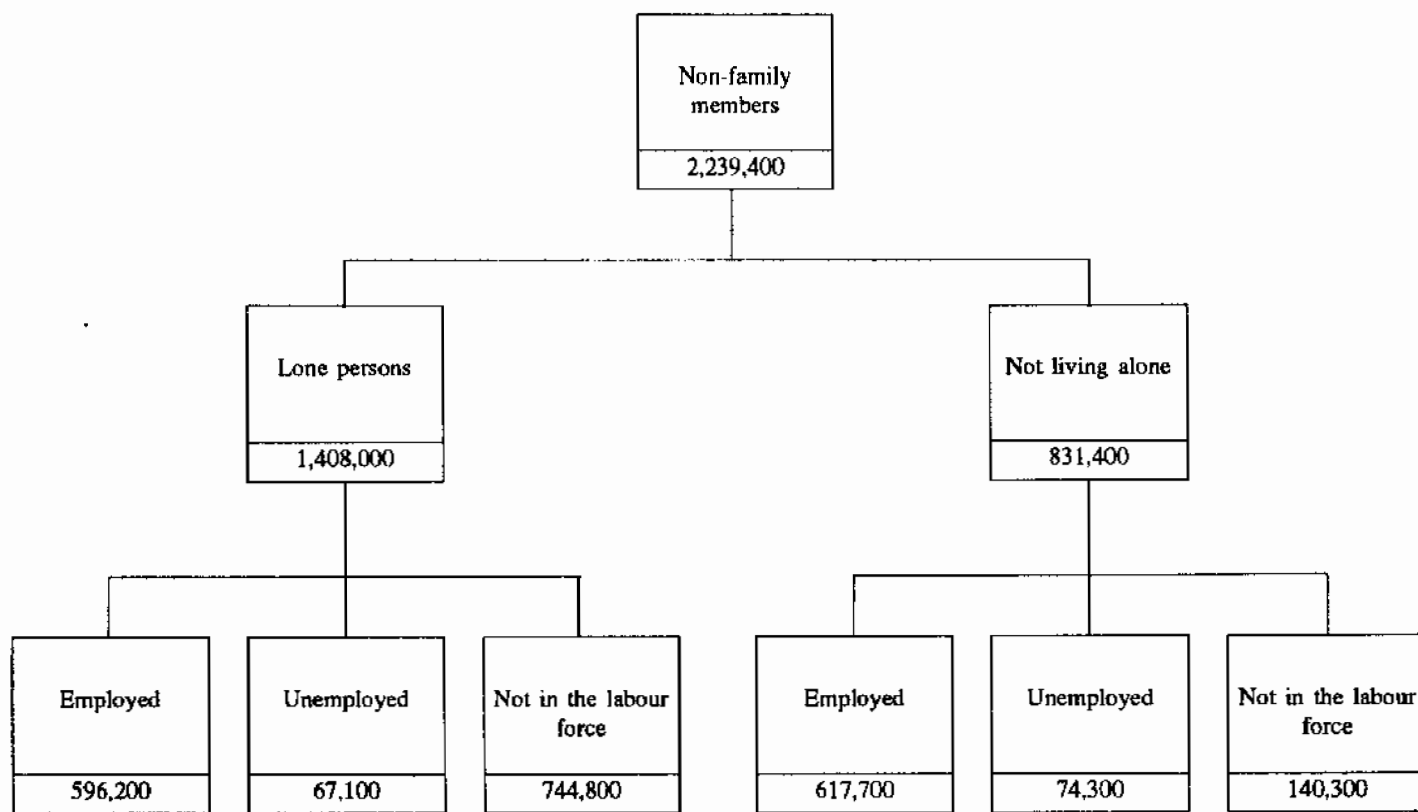

DIAGRAM 8: LABOUR FORCE STATUS OF PERSONS WHO WERE NOT MEMBERS OF A FAMILY, JUNE 1995

Source: June 1995: Section A, Table 35

#### Persons who were not members of a family

Selected characteristics of persons who were *lone persons* in June 1995 (Diagram 8 and June 1995: Section A, Tables 35 and 36):

- Of the population where relationship in household was determined, 11 per cent were classified as *lone persons*. Some 55 per cent of people living alone were female;
- An estimated 42 per cent of *lone persons* were employed. Some 57 per cent of males living alone were employed and of females living alone, 30 per cent were employed;
- 53 per cent of people living alone were not in the labour force. Of these, 70 per cent were female.

Selected characteristics of persons who were not members of a family and were *not living alone* in June 1995 (Diagram 8 and June 1995: Section A, Tables 35 and 36):

- Some 6 per cent of the population where relationship in household was determined were classified as persons who were not members of a family and were not living alone. Of these, 58 per cent were males;
- An estimated 74 per cent were employed, with the proportion being slightly lower for females than for males. The vast majority of employed males (87%) were working full time, as were 75 per cent of females;
- Some 17 per cent of these persons were not in the labour force. Of these, 52 per cent were males.

# STANDARD DATA SERVICE

## LABOUR FORCE STATUS AND OTHER CHARACTERISTICS OF FAMILIES, AUSTRALIA

JUNE 1995

Product No. 6224.0.40.001

The standard data service for statistics from the above survey comprises the following tables:

### Table

1. Summary table: Relationship in household of the civilian population aged 15 and over

#### FAMILIES—

##### All families—

##### Family type—

2. Number of dependants and number of family members employed, June 1994 and June 1995
3. Number and labour force status of family members
4. Number and labour force status of family members
- Family type—
5. Number and age of dependants and labour force status of husband, wife or family head
6. Total number and age of dependants, and labour force status of husband, wife or family head
7. Number of children aged under 5 years and labour force status of husband, wife or family head
8. Number of children aged 5 to 9 years and labour force status of husband, wife or family head
9. Number of children aged 10 to 14 years and labour force status of husband, wife or family head
10. Families with one or more members unemployed: labour force status of family members and whether dependants present

##### Couple families—

##### Labour force status of husband and wife—

11. Number of dependants
12. Age of dependants
13. Age of youngest dependant
14. Labour force status by age of wife and age of dependants: husband in the labour force
15. Labour force status by age of husband and age of dependants: wife in the labour force
- Labour force status of husband and wife—
16. Number of dependants: States and Territories
17. Birthplace of husband and number of dependants
18. Birthplace of wife and number of dependants
19. Birthplace of husband and number of family members
20. Birthplace of wife and number of family members
21. Birthplace of husband and wife
21. Birthplace of husband and wife
22. Husband unemployed: duration of unemployment of husband and labour force status of wife
23. Wife unemployed: duration of unemployment of wife and labour force status of husband

##### One parent families—

##### Labour force status of parent—

24. Age of dependants
25. Age of youngest dependant

# STANDARD DATA SERVICE—continued

## Table

- Families with a male parent—
26. Labour force status and birthplace of parent and number of dependants
  27. Labour force status and age of parent
- Families with a female parent—
28. Labour force status and birthplace of parent and number of dependants
  29. Labour force status and age of parent
  30. Parent employed: full-time/part-time status of parent and number of dependants
  31. Parent unemployed: duration of unemployment of parent

## RELATIONSHIP IN HOUSEHOLD OF PERSONS AGED 15 AND OVER—

### Labour force status—

32. Numbers, June 1994 and June 1995
33. Proportions, June 1994 and June 1995
34. Full-time and part-time status
35. States and Territories
36. Birthplace
37. Age

### Employed persons—

38. Full-time and part-time workers and weekly hours worked

### Unemployed persons—

39. Unemployment rates and proportional distribution, June 1994 and June 1995
40. Duration of unemployment

The service also provides support and background information as follows:

- Explanatory Notes
- Technical Notes
- Glossary
- Special data services—  
Data items and how to order special tables from this survey

## INQUIRIES

• for further information about the Standard Data Service and the availability of related special data services, contact Mr Don Clark on Canberra (06) 252 6018.

## *For more information ...*

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

### **Information Consultancy Service**

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

### **ABS Products**

A large number of ABS products is available from ABS bookshops (see below Bookshop Sales for contact details). The ABS also provides a subscription service — you can telephone the ABS Subscription Service Australia wide toll free on 1800 02 0608.

### **National Dial-a-Statistic Line**

**0055 86 400**

(Steadycall P/L, premium rate 25c/214 secs.)

This number gives 24-hour access, 365 days a year, for a range of statistics.

### **Electronic Services**

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about these electronic data services contact any ABS Office (see below) or e-mail us at:

Keylink	STAT.INFO/ABS
X.400	(C:AU,A:TELEMEMO,O:ABS,SN:INFO,FN:STAT)
